FILMS MAP

lab 1.2
This is the module for creating a map for the nearest film from the initial point in the world.

the sample of using:
 >>> python main.py 2000 49.83826 24.02324 path_to_dataset

result:
html map with 3 layers:

--- points with their coordinates in the shown info

--- points with names of the films

--- the layer for clasterisation of points
